

Identify & Eliminate Insider Threats

observe **it**
#1 Insider Threat Management Solution

Insiders are responsible for 90% of security incidents, according to the 2015 Verizon DBIR Report. Of these incidents, 29% are due to deliberate and malicious user actions, while 71% are the result of simple mistakes made by well-intentioned people just trying to do their jobs. Raising security awareness at the point of violation has been proven to reduce insider risk by up to 50%.

ObserveIT is a lightweight endpoint solution that is focused on identifying and eliminating insider threats. By continuously monitoring user behavior, ObserveIT alerts IT and Security teams about activities that put your organization at risk. When out-of-policy behavior occurs, on-screen notifications educate users with alternatives that are secure and compliant with company policy and industry standards.

With full video capture and playback of any policy violation, ObserveIT reduces end-to-end investigation time from hours to minutes. No sifting through logs. No combing through data.

TESTIMONIALS

TELECOM

“ ObserveIT directly minimizes the risks associated with employee activity over a full range of applications.

Diego Hernan Pizolli, CISO

Allianz 

“ ObserveIT provides unparalleled visibility into what people are doing with our sensitive systems and data.

Michael Holder, Director of Information Security

 Premier League

“ ObserveIT gives us the confidence of allowing users to do their work, while ensuring that our data is secure and monitored.

Simon Thunder, Security Analyst

xerox 

“ ObserveIT makes it fast and easy to know what people are doing. Having video evidence of any situation is priceless.

Arvo Bowen, Security Analyst

AIG

“ It's all about the people...and people are bound to make mistakes. ObserveIT helped us mitigate risk across all employees and vendors

Snir Hoffman, Security Analyst

ObserveIT Insider Threat Management

There is no doubt that the biggest security problem today is people. Whether it's intentional or unintentional, every insider on the network, from business users and privileged users to vendors and contractors, presents a threat. ObserveIT identifies and eliminates insider threats with real-time security awareness, precise visibility and fast investigations.

Real-Time Security Awareness

ObserveIT's on-screen, pop-up notifications warn end-users about actions that expose your organization to risk, while educating them with alternatives that are secure and compliant with company policy. Whether a user is accessing a file they shouldn't, copying data to a USB drive, downloading programs, or performing other activities that invite fraud and theft, they will be immediately informed of the policy violation and given an approved alternative.

Precise Visibility

ObserveIT captures and indexes where users are going and what they are doing so nothing slips through the cracks. The riskiest behavior is displayed and prioritized based on the amount of risk exposure to the organization. IT and Security teams will see who did what and have irrefutable video evidence of out-of-policy actions.

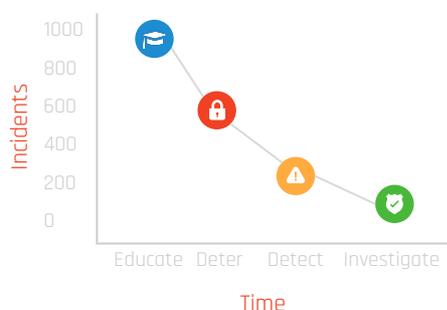

Fast Investigations

With ObserveIT, IT and Security Administrators can rapidly investigate and determine intent within seconds, removing the arduous task of sifting through system event logs and machine data. Google-like search capabilities make it possible to find suspicious activity and view incidents with dynamic video recording and DVR-like playback. A picture is worth a thousand logs.

Compliance

ObserveIT can help satisfy compliance requirements for PCI, SOX, HIPAA, and NISPOM. With detailed logs and visual recordings of all user activity, ObserveIT exceeds the strictest interpretation of compliance requirements with conclusive evidence for auditors. Audit reports can be completed in a fraction of the time, with the ability to instantly search, analyze, and view the actual video-like playback of the pinpointed session. Ultimately every compliance violation can be traced back to the specific actions of an employee, privileged user, contractor, or remote vendor.

Proven Methodology for Reducing Your Risk

Educate: Just-in-time awareness at the point of violation decreases security incidents by up to 50%

Deter: Warn policy violators that activity is being monitored. Malicious users are 80% less likely to continue

Detect: Review the riskiest users and highlight security violators with 100's of pre-packaged security alerts

Investigate: Search and review video replay to rapidly understand and address policy violations
